Subject gw sampling update

Chris,

we did the OU-1 split groundwater sampling last week and this week we are sampling the OU-2 wells.

The next round of groundwater sampling is planned for June 15-25 (if you wonder why I picked this date, it is because I have to utilize an E2 employee and work around other WAs); this will be a complete sampling of all site wells performed under OU-2. Additional compound, 123TCP, will be added this time (the plan is, as you will see in the SAP, to get two rounds of data for emerging compounds, such as 123TCP, and if they are ND site-wide, discontinue their analysis).

Also note that three analyses for the OU-2 sampling (NDMA, Chromium 6, and chemical oxygen demand) had to be sent to outside labs because of timing. It has been already arranged to have all analysis for the next round done through the CLP or Region IX labs.

The third quarter OU-2 sampling is planned for September 13-17 (again, E-2 scheduling). If that falls too far from OPOG sampling, I will re-schedule it.

Best regards,
Tom
